Summary

Full Stack Software Engineer experienced in building AI-powered SaaS applications, cloud-native developer tools, and scalable backend systems from concept to deployment. Strong background in distributed systems, real-time architectures, AI integration, and production-grade web applications, with a focus on scalable system design, performance, and developer experience.

Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS

Frontend: React.js, Next.js, Tailwind CSS, Shadcn/UI, Redux Toolkit, Zustand, TanStack Query, React Router, React Hook Form, Zod, Axios, Framer Motion

Backend: Node.js, Express.js, REST APIs, Authentication & Authorization, JWT (Access & Refresh Tokens), Google OAuth, Passport.js, WebSockets (Socket.IO), Server-Sent Events (SSE), Microservices

Databases & Storage: MongoDB, Mongoose, Redis, GridFS, Vector Databases

AI Engineering: Generative AI, LLM Integration, RAG Pipelines, LangChain, LangGraph, LangSmith, MCP (Model Context Protocol), Streaming AI Responses

Cloud & DevOps: Docker, Kubernetes, Skaffold, AWS (EC2, EKS), RabbitMQ

Security & Performance: Helmet.js, Express Validator, Rate Limiting, Backend & Database Optimization, Frontend Performance Optimization

Tools: Git, GitHub, NPM, Jest, Cloudinary, ImageKit, Nodemailer

Projects

Capstone - AI Powered Cloud Development Platform

Demo | GitHub

Tech: React.js, Node.js, Express.js, MongoDB, Kubernetes, Docker, Skaffold, Redis, RabbitMQ, Socket.IO, Monaco Editor, JWT, Google OAuth

- Designed and built a production-grade AI cloud development platform comprising 5 distributed microservices, enabling AI-driven project generation, browser-based coding, live application previews, downloadable projects, and Kubernetes-based isolated developer workspaces.
- Developed 30+ REST/WebSocket APIs integrating AI orchestration, dynamic Kubernetes pod provisioning, PTY terminal streaming, workspace lifecycle automation, authentication, and event-driven communication using Redis and RabbitMQ.
- Implemented a full-featured browser IDE with Monaco Editor, Google OAuth and JWT authentication, MongoDB GridFS workspace persistence, real-time file synchronization, and scalable multi-user execution through isolated Kubernetes sandboxes.

The Four Pillar System - Personal Habit Operating System

Live | GitHub

Tech: Next.js, React, TypeScript, MongoDB, NextAuth, Tailwind CSS, Zustand, Recharts, TanStack Table

- Developed a full-stack productivity platform that automatically generates daily habit tasks from master habits while maintaining immutable historical records and comprehensive life analytics.
- Implemented Next.js Server Actions, scheduled Vercel Cron automation, Google OAuth authentication, advanced analytics dashboards, GitHub-style calendar visualization, and real-time progress tracking.
- Optimized backend performance through bulk database operations, parallel data fetching, denormalized snapshot architecture, and efficient MongoDB indexing for scalable data retrieval.

ResolveAI - AI Powered Customer Support SaaS

Live | GitHub

Tech: React.js, Node.js, Express.js, MongoDB, Socket.IO, JWT, Redux, AI Integration

- Developed an AI-powered customer support platform featuring role-based dashboards, intelligent ticket management, AI-assisted replies, and real-time customer-agent communication.

- Engineered secure authentication, ticket assignment workflows, live analytics dashboards, and Socket.IO-powered messaging with persistent chat history and optimized API performance.
- Built scalable backend architecture supporting AI automation, modular REST APIs, role-based access control, and production-ready SaaS workflows for business support operations.

Experience

Full Stack Developer Intern (Offer Letter)

Unified Mentors

March 2026 – June 2026

- Delivered two production-ready MERN applications, implementing 25+ REST APIs, responsive interfaces, secure authentication, and MongoDB-backed backend services.
- Developed **PujaConnect**, a role-based service marketplace with customer, pandit, and admin portals, JWT authentication, booking lifecycle management, and modular MVC architecture.
- Built a **School Facility Condition Reporting Portal** enabling issue reporting, image uploads, repair tracking, notifications, and analytics dashboards for administrators.
- Collaborated using Git-based workflows, optimized API structure, and deployed full-stack applications while following production-oriented software engineering practices.

Achievements

Top 5 Finalist - ResolveAI (Team Hackathon)

2026

- Ranked among the **Top 5 teams** by building an AI-powered customer support SaaS platform during a competitive hackathon.
- Developed backend architecture, AI integration, JWT authentication, role-based dashboards, and Socket.IO-powered real-time chat using the MERN stack.
- Collaborated in a 4-member team to deliver a production-ready solution under strict time constraints.

Job Ready AI Powered Cohort 2.0

2025–2026

Sheriyans Coding School

- Completed an industry-oriented AI-powered Full Stack Development program covering MERN Stack, Next.js, TypeScript, Redis, Docker, Kubernetes, AWS, Microservices, System Design, Generative AI, RAG, LangChain, LangGraph, MCP, and production deployment.
